Abdullah Mohammed portfolio

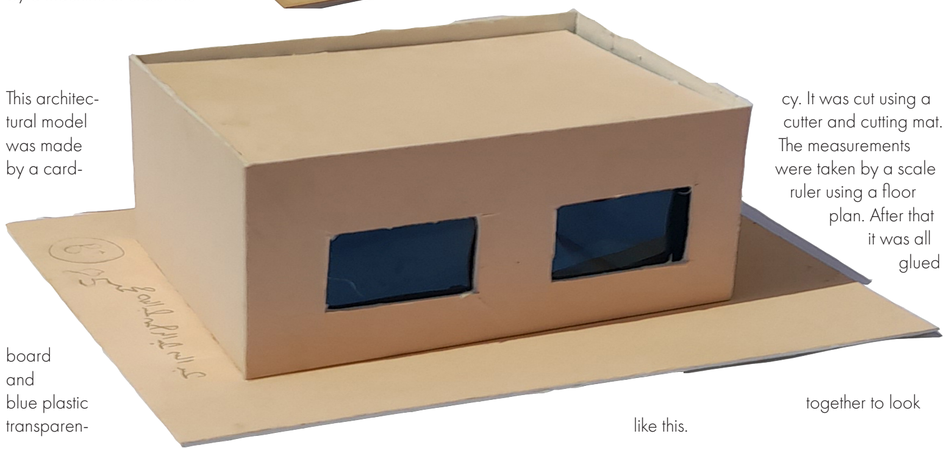

Can you see the palm tree?
This was done using black and white thick paper, cutting mat, cutter and glue. Gestalt laws were applied.

different pieces of Cardboard then was handed to students to glue the different pieces into this model using floor plans and a scale ruler. The windows were made out of colored plastic transparencies that was cut using a cutting mat and cutter then placed and glued inside.

This Architectural model was made by a different color Cardboards that was cut by a machine in class. The

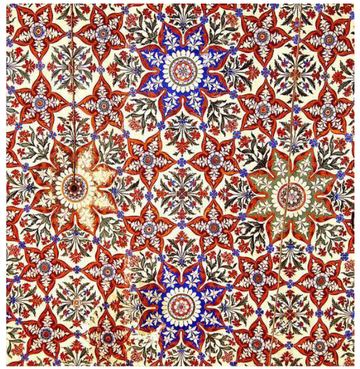

This architectural model was made by a cardboard and blue plastic transparency. It was cut using a cutter and cutting mat. The measurements were taken by a scale ruler using a floor plan. After that it was all glued together to look like this.

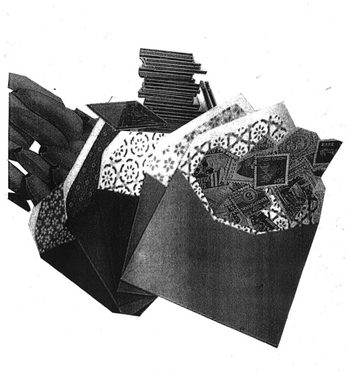

A portrait of Messi.
This was done using black and white thick paper, cutting mat, cutter and glue

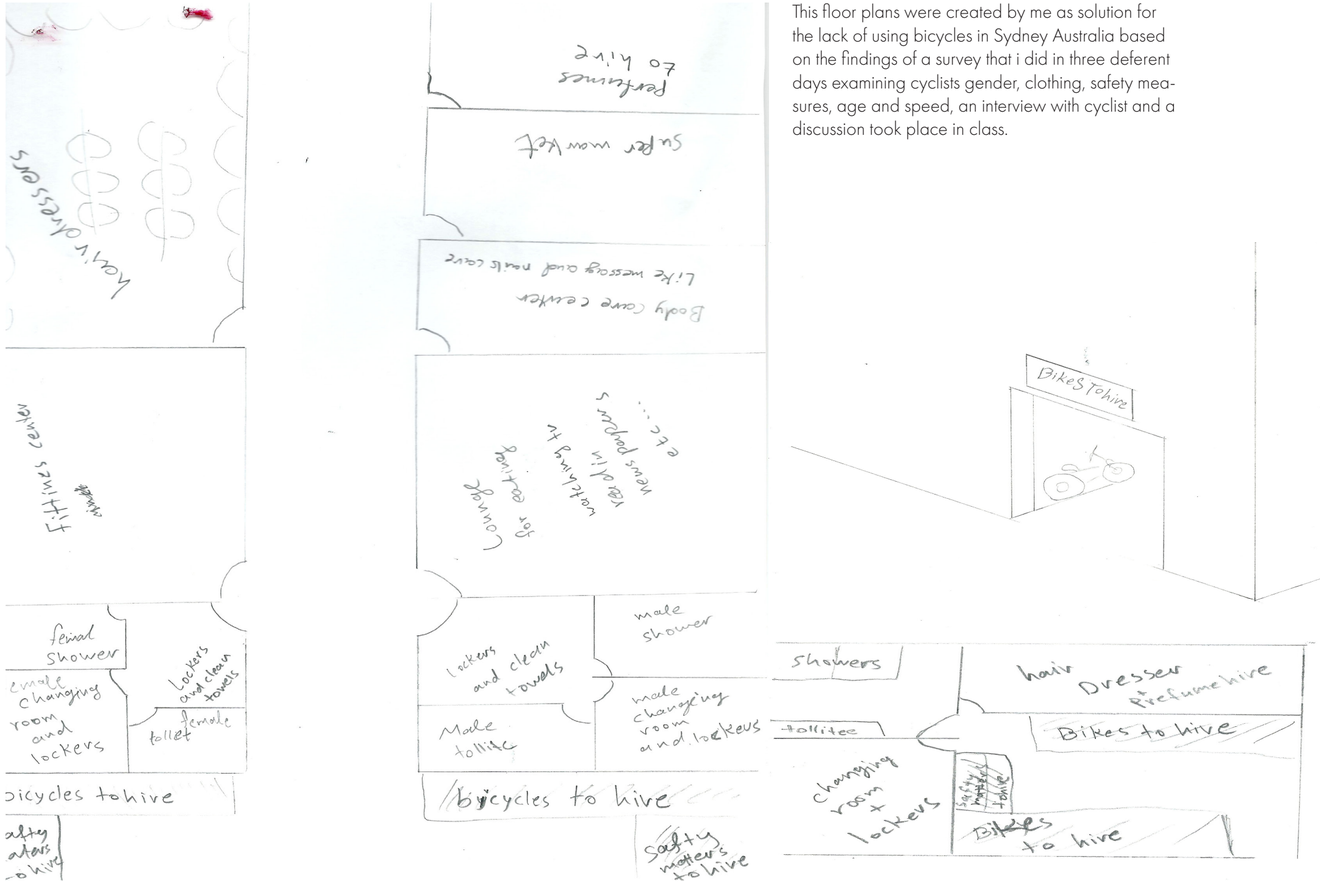

This typography was done in Ramadan using an Islamic ornament and colors that are highly used in Islam for an assessment called letter work. The word Quran were made using baskerville and Futura font in deferent sizes as well as the rest of the verses. The law of similarity was applied.

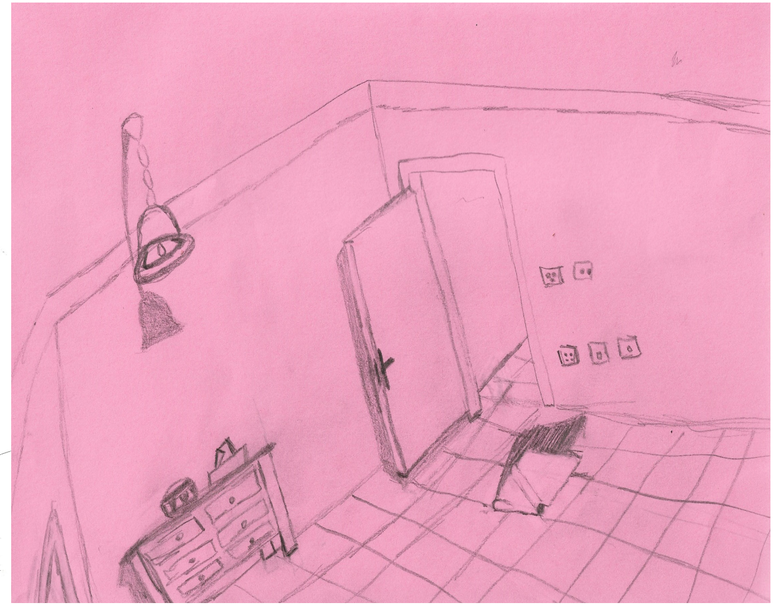

This pop art poster was done using a photo-copied collage made by me. Colors and Bauhaus font were applied using Photoshop.

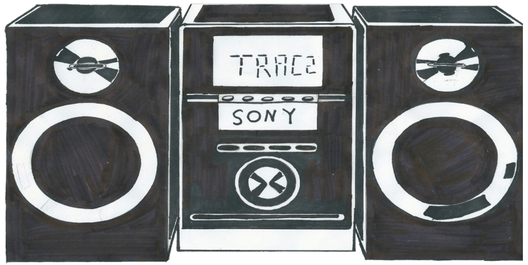

This floor plans were created by me as solution for the lack of using bicycles in Sydney Australia based on the findings of a survey that i did in three deferent days examining cyclists gender, clothing, safety measures, age and speed, an interview with cyclist and a discussion took place in class.

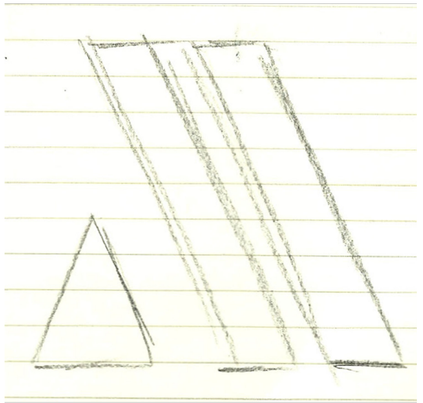

I drew this specifically for this portfolio. I was laying on my bed and this is what I was seeing or looking at from my bed.

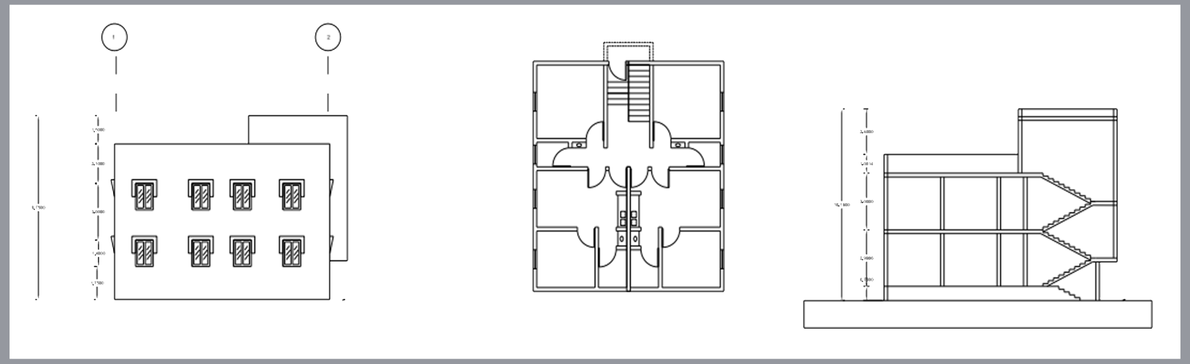

This stereo pictogram was drawn to be used and re-fined in Adobe Illustrator as a part of an assessment. The one below it is the out come of using Adobe Illustrator.

This Monogram was designed by me to be used in business cards and letterheads and it was inspired from looking to a letter W monogram in the INTERNET. The monogram represents the initials of my name A and M. The letterhead and the two business cards was designed by me using the Monogram and was represented using Adobe in design as part of an assessment.

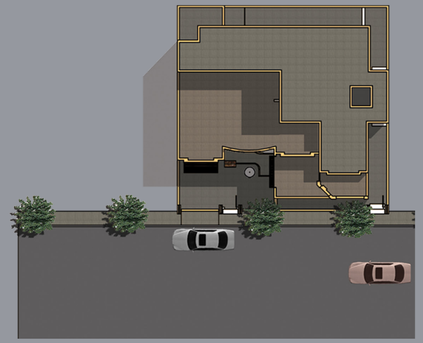

I was handed a floor plan in paper and asked to draw it in Auto cad and generate a facade and a sector out of it.

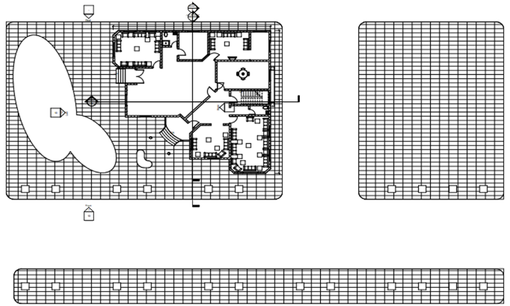

I was given an Auto cad file and told to render it using Photoshop.

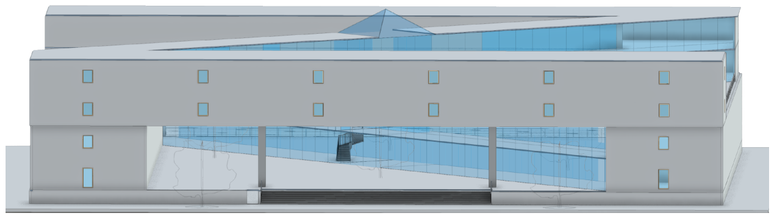

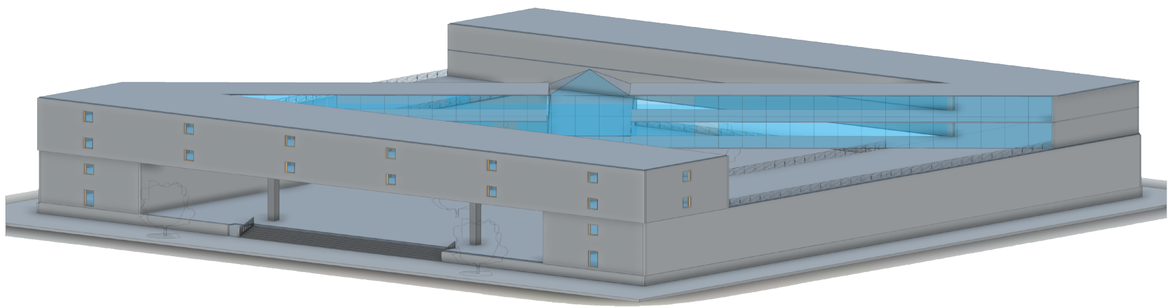

I was given a floor plan in Auto cad and told to open it in Revit and redraw it there and generate a site plan, facades, sections, elevations and render them all using Revit.

I designed this Mall as part of an assessment to introduce us to using Revit. It was inspired by minimalist stacked architecture. This was the first attempt to search Online for deferent architecture styles and to try to apply it on a design of mine not to mention its the first attempt to design a structure.

This was done in Starbucks to show my ability to observe and express how people use space.
